### DETAILED ACTION

1. The drawings filed on 11/19/2003 are accepted.
2. Claims 1, 4, 6, and 8-12 are allowed.

The following is an examiner's statement of reasons for allowance: the primary reason for allowance of the modulator of claims 1 & 4 is the inclusion of the subject matter of claims 2 and 5 combined, and wherein the modulator includes, inter alia, the quantizer quantizing the digital input signal; the adder adding the digital input signal to the signal component provided from the quantizer; and the attenuator, having a coefficient smaller than one, is connected between the adder and the single-stage delta-sigma modulator.

The primary reason for allowance of claim 6 is the inclusion of, among other things, the component separating unit and the sigma-delta modulator, wherein the component-separating unit includes a multi-bit quantizer for quantizing the digital input signal, and an adder for adding the digital input signal to the signal component provided from the multi-bit quantizer.

And for claims 8-12, these claims are allowed for the similar reason that is the modulator(s) of the claimed invention includes, inter alia, the component separating unit and the sigma-delta modulator, wherein the component-separating unit includes: a quantizer for quantizing the analog input signal; a DAC for converting the signal component provided from the quantizer to an analog signal; and an adder for adding the analog input signal to the converted analog signal. The prior of record fails to teach the modulators of the claimed invention. Therefore, claims 1, 4, 6, and 8-12 are allowed.
